Solution to last week's "White to move and mate in 2" problem : 1. Q-N5 (key)

if 1...PxQ; 2. P-K8 = Q

if 1...KxKP; 2. Q-K8

if 1...KxBP; 2. P-K8 = Q

if 1...K-K4; 2. Q-K2

The position shown is from one of my Correspondence Games which ended suddenly last week. My opponent (who is a piece down, but who has been trying for some time to mate me in the corner) played 26...R-Q6 ?? I replied 27. QxP+, whereupon to my surprise he answered 27...Resigns. On examination, I saw that he could hardly play 27...Q-B2 (because this costs him a rook) so he must play 27...K-N1. This enables White to win with the following combination :

28. RxP+! KxR; R-N1+ K-R1; 30. Q-B6+ K-R2; 31. Q-N7 mate. I would have liked to have said that I saw all that when I made my 27th move, but the truth is, I did not!
